

# NOPE!® Pre-Baited Rat Box

## Bromadiolone 25 Bait Blocks

### Product Description

**NOPE!® Pre-Baited Rat Boxes** contain NOPE!® Bromadiolone 25 Bait Blocks – a fast and lethal rodent control bait. Rodents receive a lethal dose from multiple feeds. The active ingredient, bromadiolone, is one of the strongest available in the UK for rodent control. The NOPE!® Bromadiolone 25 Bait Blocks are edible and highly palatable to rodents. Contains a bittering agent to deter non-target species and an easily visible dye that will dye rodent droppings helping to indicate the rodents are eating the bait and not just storing it away. Rodent infestations will typically be controlled within 4 – 10 days after consumption of the bait, but may take longer. Ensure that the NOPE!® Bromadiolone 25 Bait Blocks from the **NOPE!® Pre-Baited Rat Boxes** *DO NOT* come into contact with children or pets.

### Benefits

- Maximum strength poison
- Pre-Baited for reduced handling
- Highly palatable block bait
- Tamper resistant
- Discreet appearance

### Properties

	Level of Infestation	Bait Stations needed
Appearance	Low	2 – 4 bait stations every 10 m
	High	2 – 4 bait stations every 5 m
Size(s) & Packaging	1 box containing 5 blocks 2 boxes containing 5 blocks each (10 blocks)	
Registration Number	GB/N1-2016-0987-0006	
Active Ingredients	Bromadiolone (0.0025 %w/w)	
Storage	Store dry, cool and well ventilated in the original sealed container.	
Shelf Life	2 years	

### Application Information

#### Preparation

Before any treatment the site should be monitored to identify the species of rodent, their preferred routes, the size of the infestation, and the rodent's food and drinking sources.

Prior to the use of rodenticide products such as **NOPE!® Pre-Baited Rat Boxes**, non-chemical control methods (e.g. traps) should be considered. If using a rodenticide product, for improved bait acceptance, use a rodenticide bait that closely resembles the food sources the rodents have been consuming, as this increases the likelihood of them recognizing and ingesting the bait.

Take preventative control measures, such as plugging entry and exit holes and removing food and drinking sources, which are readily attainable for rodents (e.g. spilled grain, food waste or leaks) to improve product intake and reduce the likelihood of reinfestation. After treatment, avoid disturbing the area excessively as this may deter rodents returning to the area and reduce bait acceptance.

## Application

Read and follow the product information as well as any information accompanying the product or provided at the point of sale before using it.

NOPE!® Bromadiolone 25 Bait Blocks contain an anticoagulant substance. Do not use anticoagulant rodenticides as permanent baits (e.g. for prevention of rodent infestations or to detect rodent activity). If ingested by humans and non-target species, symptoms which may be delayed, may include nosebleeds and bleeding gums. In severe cases, there may be bruising and blood present in the faeces or urine. **ANTIDOTE: VITAMIN K1 ADMINISTERED BY MEDICAL/VETERINARY PERSONNEL ONLY.**

**KEEP PETS AND CHILDREN AWAY FROM TREATED AREAS.** Place NOPE!® **Pre-Baited Rat Boxes OUT OF THE REACH** of children, birds, pets, farm animals and other non-target animals. Place bait boxes **AWAY FROM** food, drink and animal feeding stuff, as well as from utensils or surfaces that have contact with these. **DO NOT** place NOPE!® **Pre-Baited Rat Boxes** near water drainage systems where they can come into contact with water.

When using the product do not eat, drink or smoke. Wash hands and directly exposed skin after using the product.

In case of:

- Dermal exposure – wash skin with water and then with water and soap
- Eye exposure – rinse eyes with eyes-rinse liquid or water, keep eyelids open for at least 10 minutes
- Oral exposure – rinse mouth carefully with water. Never give anything by mouth to an unconscious person. Do not provoke vomiting. If swallowed, seek medical advice immediately and show the products container or label. UK medical professionals should contact the National Poisons Information Service ([www.npis.org](http://www.npis.org)) for further advice. **CONTACT A VETERINARY SURGEON IN CASE OF INGESTION BY A PET.**

NOPE!® **Pre-Baited Rat Boxes** should be placed in the immediate vicinity where rodent activity has been observed (e.g. regularly used areas, nesting sites, food storage areas, holes, burrows). Where possible bait boxes must be fixed to the ground or other structures. Place the bait boxes in areas non-labile to flooding. Replace any bait that has been damaged by water or contaminated by dirt.

Because of their delayed mode of action, anticoagulant rodenticides typically take 4 – 10 days to be effective after consumption of the bait, but may take longer.

NOPE!® **Pre-Baited Rat Boxes** should be visited 5 – 7 days after the beginning of the treatment and at least weekly afterwards, in order to check whether the bait is accepted, NOPE!® **Pre-Baited Rat Boxes** are intact and to remove rodent bodies. Re-fill bait when necessary. Place 2 to 4 NOPE!® **Pre-Baited Rat Boxes** every 10 metres for a low-level of infestation and every 5 metres for a high-level of infestation.

Search for and remove dead rodents during inspections and re-filling of bait stations.

If the NOPE!® Bromadiolone 25 Bait Blocks are untouched after 35 days, the NOPE!® **Pre-Baited Rat Boxes** should be removed to remove the risk of non-target species consuming the toxic bait. If the NOPE!® Bromadiolone 25 Bait Blocks are still being consumed and rodent activity is still observed after 35 days, consideration should be given to contacting a professional pest control service.

Poisoned rodents should be double-bagged using plastic bags and either disposed of in a household waste bin with a secure lid to prevent access of wildlife and pets or collected by a specialist waste contractor or the local authority. Rodents can be disease carriers. Do not touch dead rodents with bare hands, use gloves or tools such as tongs when disposing of them.

Remove the remaining bait and/or the bait stations at the end of the treatment period. Dispose of uneaten bait and the packaging in accordance with local regulations. Waste bait should be double bagged in plastic bags and disposed of in a household waste bin with a secure lid to prevent access of wildlife and pets or should be taken to a civic amenity site. For information on civic amenity sites contact your local authority.

## Other Information

Apply only in areas that are not liable to submersion or becoming wet, i.e. protected from rain, floods and cleaning water. Do not contaminate foodstuffs, eating utensils or food contact surfaces. Keep away from food, drink and animal foodstuffs. For use only in and around buildings. Wash hands and exposed skin before meals and after use. Cover all water storage tanks before application. All bats are protected under the Wildlife and Countryside Act 1981. Before treating any structure used by bats, consult Natural England, Scottish Natural Heritage or The Countryside Council for Wales. Do not contaminate waterbodies or watercourses with chemicals or used containers. The active substance in the product is known to develop resistance in some organisms (i.e. the product becomes less effective if used frequently). The product should be used with care and in accordance with the instructions for use, in order to limit the development of resistance in other organisms.

For full health and safety information consult the safety datasheet (SDS). NOPE!® Bromadiolone 25 Bait Blocks are approved under the GB Biocidal Product Regulations for use as directed. GB/Ni-2016-0987-0006. Use pesticides safely. Always read the label.
